23. Problem: (use additional Sheets if necessary) NSIDC has asked that the NSIDC SW/HW Map be updated to reflect that NSIDC will no longer be receiving custom code for the n0sps08 host. Because n0sps08 is no longer used as a Queuing Server, update to the Site-Host map also needs to be made.						
24. Proposed Solution: (use additional sheets if necessary) Remove the following COTS products from the HW/SW baseline of n0sps08 (920-TDN-002): ClearCase, Sybase ASE, SQL Server Monitor and Forte Compilers as well as OpenClient, PERL and Tcl/tk. These products are currently baselined, but not installed on n0sps08. They need only to be removed from the baseline. Legato Networker needs to be installed at the current baseline version since it is not currently installed. Tivoli Lightweight Client 3.6.3 needs to be removed since it is currently installed, and has been removed from the baseline. ECOs are provided for these action items. N0sps08 will be called NSIDC Server.						
25. Alternate Solution: (use additional sheets if necessary) None						
26. Consequences if Change(s) are not approved: (use additional sheets if necessary) Baseline discrepancies will be generated.						
27. Justification for Emergency (If Block 15 is "Emergency"):
